

Lab 5: Retrieving Data from the Database

Aim

To retrieve data from the SQL Server database using Entity Framework Core methods:

- ToListAsync()
- FindAsync()
- FirstOrDefaultAsync()

Program.cs:

```
File Edit Selection View Go Run Terminal Help
RetailInventory

EXPLORER
▼ RETAILINVENTORY
  > bin
  > Data
  AppDbContext.cs

    Category.cs
    Product.cs
    > obj
    Program.cs
    RetailInventory.csproj

Program.cs
1  using Microsoft.EntityFrameworkCore;
2  using RetailInventory.Data;
3  using var context = new AppDbContext();
4  // Retrieve All Products
5  var products = await context.Products.ToListAsync();
6  Console.WriteLine("All Products");
7  Console.WriteLine("-----");
8  foreach (var p in products)
9  {
10     Console.WriteLine($"{p.Name} - ₹{p.Price}");
11 }
12 Console.WriteLine();
13 // Find Product by ID
14 var product = await context.Products.FindAsync(1);
15 Console.WriteLine($"Found: {product?.Name}");
16 Console.WriteLine();
17 // Find First Expensive Product
18 var expensive = await context.Products
19     .FirstOrDefaultAsync(p => p.Price > 50000);
20 Console.WriteLine($"Expensive: {expensive?.Name}");
```

Output :

Build Succeeded in 10.12s

- PS C:\Users\suman\OneDrive\Desktop\RetailInventory> dotnet run
All Products

Laptop - ₹75000.00

Rice Bag - ₹1200.00

Found: Laptop

Expensive: Laptop
