

Exercise 5: Return data from a stored procedure

```
DELIMITER $$
CREATE PROCEDURE sp_GetEmployeeCount
(
    IN p_DepartmentID INT
)
BEGIN
    SELECT
        DepartmentID,
        COUNT(*) AS TotalEmployees
    FROM Employees
    WHERE DepartmentID = p_DepartmentID
    GROUP BY DepartmentID;
END $$
DELIMITER ;
```

-- Execute Stored Procedure

```
CALL sp_GetEmployeeCount(101);
```

The screenshot shows the 'Result Grid' tab in SQL Server Enterprise Manager. It displays a single row of data for DepartmentID 101, with a total of 2 employees. The 'Filter Rows' field is empty.

	DepartmentID	TotalEmployees
▶	101	2

```
CALL sp_GetEmployeeCount(102);
```

The screenshot shows the 'Result Grid' tab in SQL Server Enterprise Manager. It displays a single row of data for DepartmentID 102, with a total of 2 employees. The 'Filter Rows' field is empty.

	DepartmentID	TotalEmployees
▶	102	2

```
CALL sp_GetEmployeeCount(103);
```

The screenshot shows the 'Result Grid' tab in SQL Server Enterprise Manager. It displays a single row of data for DepartmentID 103, with a total of 1 employee. The 'Filter Rows' field is empty.

	DepartmentID	TotalEmployees
▶	103	1
