IMailSender.cs

```
namespace CustomerCommLib
{
    public interface IMailSender
    {
        bool SendMail(string toAddress, string message);
    }
}
```

MailSender.cs

```
using System.Net;
using System.Net.Mail;

namespace CustomerCommLib
{
    public class MailSender : IMailSender
    {
        public bool SendMail(string toAddress, string message)
        {
            // Simulating mail sending
            return true;
        }
    }
}
```

CustomerComm.cs

```
namespace CustomerCommLib
{
    public class CustomerComm
    {
        private IMailSender _mailSender;

        public CustomerComm(IMailSender mailSender)
        {

```

```

        _mailSender = mailSender;
    }

    public bool SendMailToCustomer()
    {
        _mailSender.SendMail(
            "sumana@gmail.com",
            "Welcome Sumana! Your registration is successful."
        );

        return true;
    }
}

```

CustomerCommTests.cs

```

using NUnit.Framework;
using Moq;
using CustomerCommLib;

namespace CustomerComm.Tests
{
    [TestFixture]
    public class CustomerCommTests
    {
        private Mock<IMailSender> mockMailSender;
        private CustomerComm customerComm;

        [OneTimeSetUp]
        public void Init()
        {
            mockMailSender = new Mock<IMailSender>();

            customerComm = new CustomerComm(mockMailSender.Object);
        }

        [Test]
        public void SendMailToCustomer_ShouldReturnTrue()
        {
            mockMailSender
                .Setup(x => x.SendMail(
                    It.IsAny<string>(),

```

```

        It.IsAny<string>()))
        .Returns(true);

        bool result = customerComm.SendMailToCustomer();

        Assert.That(result, Is.True);
    }
}
}

```

Output:

```

PS C:\Users\suman\OneDrive\Desktop\CustomerComm> dotnet test
